TITLE Handbook of Private Accredited Trade and Technical Schools 1988. Career Education That Works for America.

INSTITUTION National Association of Trade and Technical Schools, Washington, DC.

PUB DATE 88

NOTE 84p.

AVAILABLE FROM NATTS Publications, P.O. Box 10429, Dept. 88, Rockville, MD 20850 (Free).

PUB TYPE Reference Materials - Directories/Catalogs (132) -- Guides - Non-Classroom Use (055)

EDRS PRICE MF01/PC04 Plus Postage.

DESCRIPTORS *Accreditation (Institutions); Curriculum; Evaluation Criteria; Occupational Information; Postsecondary Education; *Private Schools; Program Content; *Proprietary Schools; *School Choice; *Technical Education; *Trade and Industrial Education

ABSTRACT

This handbook includes general information about factors to consider when selecting a trade and technical school and detailed information about the program offerings of all of the private technical schools that were accredited by the Accrediting Commission of the National Association of Trade and Technical Schools as of September 1, 1987. Important factors to consider when comparing the feasibility of different careers are discussed in the first section. The second section contains alphabetically arranged descriptions of 98 careers that can be learned in two years or less along with state-coded lists of accredited trade and technical schools offering training programs in the specific occupational areas. Private career schools and guidelines for choosing one are the subject of the third section. The importance of accreditation is explained. The next section, a state-by-state listing of accredited trade and technical schools, includes each school's address and a listing of its program offerings. A brief set of career questions and answers concludes the guide. (MN)

NATTS: THE ORGANIZATION

The National Association of Trade and Technical Schools (NATTS) is a membership organization open *only* to those schools which have first achieved accredited status.

The NATTS Accrediting Commission is an autonomous arm of the Association and makes independent decisions which are *not* subject to review by the Association. However, the Association does contribute financial support to aid the accrediting process so that all costs associated with accrediting are not thrust upon applicant schools, which are often emerging institutions least able to bear extra expense.

NATTS: THE ACCREDITING COMMISSION

The Accrediting Commission of the National Association of Trade and Technical Schools (NATTS) provides institutional accreditation for private residence schools within U.S. jurisdiction offering programs leading to occupational objectives.

The Accrediting Commission of the Association is listed by the U.S. Department of Education as a nationally recognized accrediting agency under the provisions of Chapter 33, Title 38, U.S. Code, and subsequent legislation. The Accrediting Commission is a member of the Council on Postsecondary Accreditation. NATTS is incorporated in the District of Columbia as a nonprofit corporation.

This handbook is published annually by the National Association of Trade and Technical Schools. The Schools listed herein were NATTS accredited as of September 1, 1987. Additions or deletions may have occurred since that date.

Information concerning the current accreditation status of any school listed herein may be obtained by contacting NATTS Accrediting Commission, 2251 Wisconsin Avenue, N.W., Washington, DC 20007, (202) 333-1021.

Only schools currently accredited by the NATTS Accrediting Commission are entitled to display this Hallmark of Accreditation.

Career Hunting? Here's How

The first rule in planning your career is simple—*take some time and do it!* Most people never get around to learning about careers. They fall into a job and lifetime career patterns follow—and most people spend an average of 25 to 45 years on the job.

Career planning takes thought and enough information to make a sound decision. Just a few hours of investigation will pay off many times.

There's another important reason for thinking seriously about a career. Jobs are becoming increasingly specialized. The U.S. Department of Labor counts over 30,000 career specialties in existence today.

New technologies are creating a demand for a highly skilled work force. As a result, employers are putting a premium on specific skills. In fact, the Labor Department estimates that the majority of jobs through 1995 will require trade or technical training.

Labor also predicts that "tremendous growth" and good career opportunities will be typical of the service-producing industries. The service-producing industries will account for 7 of every 10 workers. Health care, data processing, repair and maintenance, and legal assistant/paralegal careers are all expected to be good bets for steady, upward employment.

First Steps...

The first step in choosing a career is to consider the variety of careers available today. Talk to your counselor about the possibilities, go to a library, or contact your state's labor department, then follow these pointers.

YOUR INTERESTS. Do you enjoy helping people, working with your hands, working with numbers, creating, designing, being outdoors? Identify your likes and translate them into career possibilities: mechanics, dress design, allied health, electronic technology, advertising, computer programming. Probably the most important factor in career satisfaction is liking what you do.

SALARY. What is the starting salary of your chosen career? What can you expect to earn after two or three years on the job? What about after 15 years? Check with employers. Get realistic estimates of what the return on your investment will be.

ADVANCEMENT. Is the career you've chosen open-ended? Where will it lead you? If your goal is to eventually start your own business—will it allow you that opportunity?

JOB DEMAND. Is there a need for your career specialty? Will your job be in demand or are there more people than jobs? Also, get long-range projections of demand. Choose a career with a good future. Make sure your job won't become obsolete in a few years.

JOB MOBILITY. Where are the jobs? In your locale? Or are jobs clustered in specific areas which would give you the opportunity to travel? For example, commercial divers usually have to relocate (sometimes overseas) while computer programmers work mostly in large and medium-sized cities. Medical workers, on the other hand, can be found everywhere.

WORKING CONDITIONS. Find out exactly what a person in your chosen career does—know exactly what your duties and work environment will be. A career may sound glamorous or exciting but before you make up your mind get *all the facts*. Don't be unpleasantly surprised on the job.

EDUCATIONAL REQUIREMENTS. Most good jobs today require specialized training beyond high school. Remember, quality not quantity counts. It's not how many years of education you have, it's what type. Overall, specialized training is more "marketable" than a general education. Find out what type of education you need in order to qualify for your career. It may take a few months, or one or two years of training.

Guide to Skill Training At NATTS-Accredited Schools

Skill	Terms	Page	Skill	Terms	Page
Actor	150 weeks	4	Heavy Equipment Operator	3-10 weeks	23
Air Conditioning/Refrigeration Technician	12-73 weeks	4	Horsemanship Specialist	8 weeks	23
Animal Trainer	3-6 weeks	4	Horticulturist	40 weeks	23

Drafter	17-88 weeks	17	Retailer	36-45 weeks	31
Dressmaker and Designer	3-88 weeks	18	Seaman/Marine Technician	16 weeks	32
Electrician	21-104 weeks	18	Secretary/Transcriptionist	24-38 weeks	32
Electrologist	52 weeks	19	Shorthand Reporter	104 weeks	33
Electronics Specialist	24-108 weeks	19	Skin Care Specialist	26 weeks	33
Emergency Medical Technician	28-34 weeks	21	Surgical Technician	52 weeks	33
Engraver	12 weeks	21	Tailor	5-60 weeks	33
Fashion Designer	33-96 weeks	21	Theater Production Specialist	60 weeks	33
Fashion Illustrator	52-136 weeks	21	Tool and Die Designer	28-108 weeks	33
Fashion Merchandiser	34-72 weeks	21	Travel Specialist	6-34 weeks	34
Flower Arranger	10 weeks	22	Truck Driver	1-8 weeks	34
Food Service Specialist	52 weeks	22	Upholsterer	10-26 weeks	35
Gemologist	26 weeks	22	Veterinarian Assistant	28-72 weeks	35
Gunsmith	69 weeks	22	Vocational Nurse	48 weeks	35
Heating Mechanic	12-24 weeks	22	Watchmaker and Repairer	52 weeks	35
			Welder	2-72 weeks	35
			X-ray Technician	100 weeks	36

98 Careers You Can Learn in Two Years or Less* And the Schools That Offer Them

*Some schools may offer programs extending beyond two years.

Actor. By interpreting roles and portraying a range of moods, actors exhibit versatility and use natural talent accentuated by intense training. Acting demands stamina, patience, determination, and commitment. Actors often work long hours and must be able to memorize lengthy scripts. They work in film, TV, radio, commercials, and corporate films.

AZ Plaza Three Academy
CA Estelle Harman Actors Workshop
DC National Conservatory of Dramatic Arts

Air Conditioning/Refrigeration Technician. Installing and maintaining cooling equipment, along with diagnosing and repairing problems, are the main functions of an air conditioning technician. They may work for utility companies, contractors, dealers, or they may be self-employed.

Animal Trainer. Trains animals for a variety of purposes including show business, security, and seeing eye dog. Will evaluate temperaments and aptitudes of animals and set up programs to develop desired behavior. Trainers are identified according to specific animal trained.

OH National K-9 School of Dog Trainers

Appliance Repairer. Repairers are knowledgeable about how appliances' electrical, electronic, and mechanical components function. They know where to look for problems and how to correct them. They work on all types of consumer appliances and make house calls when the appliance is too large to be brought into the shop. Most repairers work for small independent appliance stores and repair shops.

Artist, Commercial. Commercial artists design and create the artwork found on TV, brochures, records, product packages, greeting cards, and in newspapers and magazines. They must have creative instincts, professional training, and the ability to carry a project through from conception to completion. Many specialize in advertising art. Artists work for corporations in their art departments, for advertising companies, or are self-employed as freelancers.

Artist, Fine. Fine artists (distinct from commercial artists) visually express the world around them in abstract or concrete terms through sculpture, painting, carving, and other creative media. They may work independently, selling their works through galleries or for public or private patrons who commission works. Some artists work in art departments of schools and colleges or in art museums. Others become art critics for newspapers or magazines.

Automotive Specialist. Some auto specialists are generalists, with ability in every phase of a car's operation. However, the complexity of a modern-day car, with over 30,000 parts, has created a need for specialists in body work, transmissions, tune-ups, brakes, and other areas. In addition to understanding the electrical, mechanical, and electronic components of a car, auto specialists need to know how to use diagnostic equipment and how to make repairs. They work for auto dealers and repair shops, manufacturers, and taxi and auto leasing companies. (See also Diesel Mechanic)

Aviation Maintenance Technician. Airplane mechanics routinely maintain and inspect a plane's machinery. They take engines apart, measure parts for wear with delicate instruments, check for invisible cracks with x-ray and magnetic inspection equipment, and replace worn parts.

They inspect the structure of the plane for damage and stress. Mechanics specializing in engines are powerplant mechanics. Those working on structure fuselage, wings, and landing gear are airframe mechanics. Most mechanics work for airlines, aviation manufacturers, or in general aviation.

Bank Teller. Tellers cash checks and process deposits and withdrawals. They usually begin their day before the bank opens and continue working after the bank is closed. Tellers start work by receiving and counting an amount of working cash for their drawer. They use the cash for payments during the day and are responsible for its safe and accurate handling. They also sort checks and deposit slips.

Barber/Hairstylist. Men go to barbers for haircuts, hairstyling, and coloring. Barbers and hairstylists must be licensed by the State in which they practice. In preparation for the licensing exam, they obtain training for a specified number of hours. Most barbers or hairstylists work in small, independent shops or unisex salons. More than half are self-employed.

Boatbuilder. Fabricates, repairs, or modifies wooden boats, life rafts, and pontoons using blueprints and a variety of tools such as handtools, power tools, scales, protractors, and measuring instruments. Creates a full scale outline of boat, makes templates of parts, and builds and installs structures and preformed parts.

ME The Landing School of Boat Building and Design

Brickmason. Brickmasons build lasting structures—walls, fireplaces, barbecues, chimneys—out of bricks and mortar. They may also have to work with other masonry materials such as cinderblock. Brickmasons must be able to handle heavy loads and be adept at using plumb lines and levels in producing a neat, uniform appearance. Most brickmasons work for building contractors. About one in seven is self-employed.

 PA Technician Training School

Broadcaster. Broadcasters work on the public airwaves. Employed by TV or radio stations, they introduce programs, guests, and musical selections, and deliver news and live commercials. In small stations they may also operate the control board, sell advertising, and write commercial and news copy. Most work for radio stations, about 7,000 around the country. The rest work for the approximately 700 TV stations.

Broadcasting Technician. Getting the program on the air is the job of the broadcast technician. They operate and maintain the electronic equipment used to transmit radio and TV programs, regulating the quality of the sound and picture being broadcast. They operate controls which switch broadcasts from one camera or studio to another, from film to live programming, or from network to local programs. Broadcast technicians know the characteristics of electromagnetic waves, the construction and operation of transmitting and receiving equipment, and federal broadcasting regulations and practices.

Building Maintenance Technician. Building maintenance technicians keep buildings clean and in good working condition. Managing the upkeep of a building requires specialized knowledge of heating and ventilating systems, cleaning equipment, chemical cleaners and their proper use, insect and rodent control, basic electricity, and plumbing repair. Most building maintenance technicians are employed by building maintenance contractors or building management firms. Some work on their own.

Cabinetmaker. Cabinetmakers are concerned with the complete cycle of cutting, shaping, and assembling prepared parts of complex wood products, such as store fixtures, office equipment, and home furniture. They set up and operate a variety of woodworking machines and use various hand tools to fabricate and repair wooden cabinets and high-grade furniture. They also may repair high-grade articles of furniture and may install hardware, such as hinges, catches, and drawer pulls.

Carpenter. Carpentry requires the ability to solve mathematical and geometrical problems quickly and accurately, plus good physical condition and manual dexterity. The work is divided into "rough" and "finish" carpentry. Rough carpentry includes erecting frames, joists, rafters, scaffolding, and temporary structures. Finish work is done when appearance counts such as in stairs, paneling, and floors. Some carpenters specialize in a certain type of work—building homes, for example.

Civil Engineering Technician. Technicians in this area assist civil engineers in planning, designing, and constructing highways, bridges, dams, harbors, airports, pipelines, and other structures. They often specialize in one area such as highway or structural technology. They estimate costs, prepare specifications for materials, or participate in surveying, drafting, or design-

ing. Once construction begins, they may assist the contractor in scheduling construction activities and inspecting the work to insure it conforms to blueprints and specifications.

Computer Programmer. Converts symbolic statements of administrative data or business problems to detailed logical flow charts for coding into computer language: Analyzes all or part of workflow chart or diagram representing business problem by applying knowledge of computer capabilities, subject matter, algebra, and symbolic logic to develop sequence of program steps. Corrects program errors by such methods as altering program steps and sequence. Prepares written instructions to guide operating personnel during production runs. Analyzes, reviews, and rewrites programs to increase operating efficiency or adapt to new requirements.

Computer Service Technician. Installing and keeping the system working is the job of the computer service technician. Technicians service, repair, and adjust the electronic, electrical, and mechanical parts of the computer. Determining what has malfunctioned in the system is often the most difficult part of the job. Computer service technicians use several types of testing equipment to locate the failure, and run diagnostic programs to pinpoint problems. They are employed by manufacturers of the equipment, maintenance service firms, or organizations with large computer installations.

Dealer. Dealers conduct a gambling table, such as dice, roulette, or cards, in a gambling establishment. They exchange paper currency for playing chips or coin money and ensure that all wagers are placed before cards are dealt, roulette wheel is spun, or dice are tossed. In addition to announcing winning numbers or colors to players, the dealer computes payable odds to pay winning bets. The dealer also pays winning bets and collects losing bets.

Dental Laboratory Technician. Using their knowledge of dental anatomy and working from a dentist's prescription, dental lab technicians make dentures, fabricate metal or porcelain crowns and inlays, construct bridges, and make dental orthodontic appliances such as braces.

The technician performs delicate and precise work using small hand-held instruments to produce an accurate fit and natural-looking effect. Most work in commercial laboratories. Many own their own laboratories.

Diamond Cutter/Jewelry Designer. Diamond cutters evaluate a diamond, determine its grain structure and flaws, and then decide upon a cut which would result in the least waste. Diamond cutters also repair broken diamonds and modernize old style cuts. They also are knowledgeable in purchasing and selling diamonds. Some may specialize in diamond buying and grading.

CA American School of Diamond Cutting
 CA Gemological Institute of America
 NY Gemological Institute of America

Diesel Mechanic. Diesel mechanics (usually called by their specialty, for example, bus mechanics, heavy equipment mechanics, etc.)

care for and repair diesel engines. Some mechanics may specialize in one type of diesel engine, others in one component—cylinder heads, turbochargers, or starting systems.

The diesel mechanic must know how to run tests on the engine, make adjustments, and repair parts. They mostly work for trucking companies, bus lines, construction firms, highway departments, and manufacturers.

Dietetic Technician. Dietetic technicians are trained to assist a dietitian in planning meals, often for therapeutic purposes such as in hospitals

or health care centers, or in areas where nutrition is of special concern, such as in schools.

These workers also supervise the preparation and serving of food. They are responsible for food purchases and accounts. A dietetic technician working in a hospital or nursing center may have additional duties—implementing a dietary plan developed by a dietitian, explaining the plan to a patient, and making follow-up visits to the home.

Diver. Continued underwater research and development require the skills of underwater divers who can perform technical skills in building, salvaging, inspecting, and demolishing underwater structures. Underwater divers work for a variety of employers from oil companies exploring offshore wells to fish farms where tanks and equipment must be maintained.

The work requires an excellent physical condition since the diver must maneuver heavy equipment underwater and dive in cold water under extreme pressures. The work may require considerable travel to foreign areas.

Drafter. Drafters produce drawings showing the exact dimensions and specifications of each part of the whole from all sides. Drafters work from rough sketches, specifications, and calculations made by scientists, designers, engineers, and architects. They also calculate strength, quality, costs, and quantity of materials. Drafters usually specialize in a particular field such as electronic, electrical, mechanical, structural, architectural, or aeronautical drafting.

Electrician. There are two types of electricians: construction and maintenance. Construction electricians work on building sites and, following blueprints and specifications, install the wiring which will operate heating and air conditioning, lighting, power, and refrigerating equipment. Maintenance electricians keep electrical equipment in good working order in plants, offices, and homes. They may work from blueprints and wiring diagrams to locate problems, and use meters and other devices to test equipment.

Emergency Medical Technician. An EMT travels to the site of an emergency, evaluates a patient's condition, establishes priorities for emergency medical care, and begins to administer lifesaving care such as maintaining an open airway, restoring heartbeat, checking bleeding, treating for shock, or immobilizing fractures until such time the patient is delivered to the hospital.

EMTs are mostly employed by metropolitan emergency units, police, and fire departments, private ambulance companies, and hospitals.

Heavy Equipment Operator. Heavy construction machinery is difficult and complex to operate. Moving tons of earth and construction materials and erecting steel beams and girders requires considerable skill. Operators must judge distances and heights and must control a variety of levers, pedals, and buttons to command the right motion. Most operators work for contractors in building highways, factories, dams, airports, offices, or apartment buildings. They operate bulldozers, cranes, trench excavators, paving machines, and other types of heavy construction equipment.

OR West Coast Training, Inc.
 PA Superior Training Services

Horsemanship Specialist. Working with horses offers a variety of careers to riders, trainers, or teachers of riding. These careers require knowledge of horse care, horse anatomy and illnesses, the different types of horses, stable maintenance, and the different types of horse-related equipment and their uses.

Those trained in horsemanship may work in small or large horse operations, municipal recreational departments which have stables, or a camp.

MI Black Forest Hall
 OK Oklahoma Horsehoing School, Inc.
 OK Oklahoma Farriers College

Horticulturist. Growing orchard and garden plants takes specialized knowledge of plant physiology, ideal growing conditions, and plant pests and diseases. Commercial growing is usually done in a greenhouse operation where business and management procedures must also be applied. In addition to greenhouses, those skilled in growing plants may also work in garden centers or flower shops. Many are self-employed.

IL DuPage Horticultural School

Hotel-Motel Manager. Hotels and motels must be run successfully and profitably by a specially trained management staff which is headed by a general manager and several assistant managers. Managers oversee the establishment's reservations and sales, housekeeping, and food and beverage operations.

They may work in small independent hotels or large hotel and motel chains. About a third are self-employed.

Medical Assistant. A medical assistant helps with the preparation and treatment of a patient. Medical assistants may take and record the patient's weight, temperature, pulse, and blood pressure. In addition, the assistant aids the physician in minor surgical procedures or other treatments. The assistant may also perform laboratory tests normally performed in a physician's office.

In a smaller office the assistant would also be responsible for maintaining patient records, scheduling appointments, filling out insurance forms, ordering supplies, and performing other office management duties.

Motorcycle Mechanic. Many motorcycle enthusiasts repair their own vehicles, but most rely on skilled mechanics. Like automobiles, motorcycles need servicing and repair. Spark plugs, ignition points, brakes, valves, and other electrical and mechanical parts need regular adjustment or replacement.

Mechanics may also work on mini-bikes, snowmobiles, outboard motors, mopeds, and other equipment powered by small gasoline engines. Most work for motorcycle dealers. Some work for city governments on police motorcycles.

Nurse's Aide. Making patients comfortable and providing their basic care in a hospital, nursing home, or other medical facility are responsibilities undertaken by a nursing aide. (Men are called orderlies.) These workers answer patient's bell calls, serve meals, feed patients who cannot do so for themselves, bathe and dress patients, assist them in getting out of bed and walking, and change beds. They may also take temperatures, give massages, and set up medical equip-

ment. Some work as ward clerks. They work under the supervision of registered nurses and licensed practical nurses.

Office Machine Repairer. Business machine repairers make regular service visits to customers to repair typewriters, calculators, dictating machines, postage meters, and copying equipment. Worn or broken parts are replaced and the machine is cleaned, oiled, and adjusted. In addition, the repairer must be able to fix malfunctions on the spot or remove the machine to the shop.

Repairers mostly work for manufacturing companies and dealers.

Painter. Painters apply paint, varnish, and other finishes to decorate and protect interior and exterior building surfaces. Painters sand or scrape away old paint, fill nail holes, remove grease, and repaint surfaces of wood, plaster, concrete, metal, masonry, or drywall.

They must be able to mix paints and match colors and choose the paint to suit the purpose. Many painters work for contractors engaged in new construction or remodeling. Also, large property managers hire painters. About one-

fourth of all painters are self-employed.

- PA Williamson Free School of Mechanical Trades

Paperhanger. Decorating with wallpaper, fabric, or vinyl enhances an interior surface. In order to get a professional look, paperhangers prepare the surface by filling in gouges and sizing to enable the covering to stick better. They then measure, align, and smooth the covering on the wall. Paperhangers work for painting and decorator contractors, or they own their own businesses.

- VT United States School of Professional Paperhanging

Pet Groomer. Pet owners arrange for a professional to clean and groom the pet. In addition, many pet owners require boarding facilities for their pet from time to time. Also, pet shops need those who have been trained to properly feed, exercise, and maintain pets in kennel conditions.

Those in pet grooming and kennel management are self-employed or are employed by pet shops and kennels or in the pet departments of large stores. They also work for humane societies.

Photographer. Photography is specialty-oriented. Some photographers do portraits or weddings. Others are fashion photographers or photojournalists. Commercial photographers frequently do catalogs, cookbooks, or take pictures for magazine and newspaper ads. Industrial photographers photograph corporate heads, factories, and machinery for annual reports or for management's use in analyzing production methods.

Scientific photographers record experiments or other scientific phenomena. Medical photographers photograph patients with diseases, surgical operations, and other medical-related subjects for medical textbooks or magazines.

Photographers also work in environmental areas to trace the spread of pollutants in rivers and on police forces to record the scene of a crime and accompanying evidence. About one-third of photographers are self-employed.

Truck Driver. Truck drivers haul cargo from dynamite to baby food over long and short distances. Local drivers move goods from terminals and warehouses to factories, stores, and homes within the area. Before beginning their journey, drivers check the condition of their truck, see that it is properly loaded and balanced, and unload at the destination.

Long distance drivers travel major routes over long, often interstate, distances on journeys which may take several days. These drivers operate the largest, most expensive, and most complicated equipment on the road.

Drivers must meet Department of Transportation regulations regarding age (must be over 21), health, vision, hearing, driving record, road skills, and knowledge of Federal regulations.

Veterinarian Assistant. Veterinarian assistants help prepare an animal for examination or surgery. They may take samples, perform lab and X-ray tests, administer medication, and sterilize instruments. In addition, they may make appointments, keep records, and handle billing. Most veterinarian assistants work in a veterinarian's office, veterinary hospital, kennel, research institute, or zoo.

Watchmaker and Repairer. When watches or clocks malfunction, we take them to a watch repairer, frequently called a watchmaker. Repairers take the movement apart, examine it with the aid of a special magnifying glass called a loupe, and diagnose the problem. Repairers may have

to replace parts or clean and oil the mechanism. The timepiece is then tested with a timing machine. Electronic watches are tested on electrical equipment to see that the circuits work properly. About one-third of repairers are self-employed. Others work in jewelry stores.

NY Joseph Bulova School
PA Hiram G. Andrews Center

Welder. Welding requires a high degree of technical knowledge of the characteristics of metals, heat processes, and types of joints. The welder also knows how to read blueprints and make welds accordingly. Some specialize in ship welding, pipeline welding, maintenance welding (equipment and machines), and other branches.

Welders are mostly employed in the manufacture of durable goods, for example, boilers, bulldozers, trucks, ships, and heavy machinery. Others repair metal products and help construct buildings, bridges, and pipelines.

X-ray Technician. A technician operates X-ray equipment at the request of a physician. The technician prepares and positions the patient in such a way as not to aggravate injuries. The technician then positions the X-ray machine, sets controls to achieve the right density, detail, and

contrast, inserts a plate, and turns the machine on. The technician then develops the plate and marks it for identification. X-ray technicians work in a physician's office or hospital.

Private Career Schools That Teach Careers— And How To Choose One

Most careers require specialized skills. Neither a high school diploma nor a college degree is sufficient for many jobs. Among those careers which are growing the fastest are those requiring two years of training or less.

There are many ways to obtain the skills for these careers. Schools that specialize in offering career training are called private trade and technical career schools. These small, single-purpose schools are experts in sending their graduates into the job market with skills.

Private career schools have a no-nonsense approach to career education which is hard to find elsewhere. Practical knowledge and professionalism are stressed in concentrated training programs where students frequently learn by solving real work problems in a job-like setting.

PRACTICAL, TIME-SAVING PROGRAMS

To save you time, training is intense, and only those courses related to your career choice are required. And while private trade and technical career schools charge tuition—some hundreds, some thousands of dollars—private career school courses are usually shorter, so you finish sooner.

The courses are designed for those who have not been exposed to trade or technical training. Knowledge of math or science is not a prerequisite in many programs.

You can find courses scheduled to start within a few weeks of the time you are ready to enroll. In most schools the same course will begin from 3 to 12 times a year. Classes are usually held five days a week and evening classes are generally available.

ADMISSIONS

The first requirement for admission to most schools is a desire to learn. Generally, accredited private trade and technical career schools require a high school diploma or General Educational Development (GED). However, work experience may help to waive that requirement.

NATTS schools do not discriminate in admission policies. Minority students seeking to enter fields previously closed to them will find open doors at NATTS schools.

SMALL CLASSES

Classes are usually small with ample time for individual attention from teachers. Private trade and technical career schools are busy and friendly places. You will quickly notice a unity of purpose in the schools because students are at work to learn, to prepare for a job, and to be successful.

JOB PLACEMENT

Another major feature of accredited private trade and technical career schools is their emphasis on placement of graduates. Training is most of the job, but since these schools are employment-oriented institutions, placement is also very important. Moreover, a reputation of good placement is essential if a school is to thrive year after year, so occupational schools work closely with employers. This contact helps graduates find good jobs and employers find qualified employees.

Schools provide placement assistance in a number of ways. In addition to seeking out actual job openings, some schools conduct sessions in resume writing and interviewing as you near graduation. Others will arrange interviews or invite employers to interview at the school.

While placement rates vary from career to career, most men and women who are available for work after completing their training at a NATTS accredited private trade or technical career school have little difficulty finding a job in their field.

HOW TO CHOOSE A SCHOOL

The first step is to write to three or more schools offering training in your chosen career. Ask for their catalogs. Then compare each school according to the following checklist:

STATE LICENSING. Is the school licensed by your state's postsecondary school licensing bureau? If the school's catalog doesn't indicate, check with the Department of Education in your state. A few states do not require licensing, but most do.

ACCREDITATION. An important indicator, accreditation means the school has passed a thorough examination of its educational quality, teaching ability, and administrative integrity by an accrediting agency recognized by the U.S. Department of Education. Accreditation is usually listed in the school's catalog, and it's a good idea to double-check with the accrediting agency itself.

COURSES. Are the courses offered up to date, well rounded, and of high quality? Will they adequately prepare you for your field? Who teaches them—instructors with professional experience in the career? How long will training take?

FACILITIES AND EQUIPMENT. What type of buildings, classrooms, facilities, and equipment does the school offer? Is the equipment current with that being used in the field?

HANDS-ON TRAINING. Does the school have a laboratory or shop setup which duplicates a real work environment? Hands-on training enables students to obtain practical and valuable experience.

PLACEMENT ASSISTANCE. Does the school offer regular placement assistance? How does it help find jobs for graduates? At what types of jobs are graduates placed?

COST. What is the total cost of tuition, supplies, and fees? Can you realistically afford the school? Find out what the school's refund policy is.

Naturally, the very best way to check out a school is to visit it yourself. Choose a day when classes are in session. Talk to students—are they happy with their training? Look around at the buildings and equipment—how do they compare with the catalog description? If possible, talk to graduates and find out what they think of the school.

NEXT STEP—HOW TO APPLY

For complete information about a school, write to the school directly using the forms which are located on pages 37 and 38 of this handbook. The addresses of all NATTS-accredited schools are given on pages 42 through 78.

Accreditation . . . Why It's Important to You

Any schooling beyond high school costs quite a bit these days. Tuition, fees, supplies, and income lost while you're in school make postsecondary education a considerable investment. You will expect it to pay off in a good, satisfying career.

In order to get the most out of your investment, always get as much information about your chosen career and private career school as possible. When choosing a private career school, check for accreditation.

Accreditation is your assurance that a private career school has met national standards of educational performance which have been established by an impartial nongovernment agency. The accrediting of schools by professional, national, and regional associations of like schools—schools with similar objectives and like subject content—has long characterized the American education scene. Through the years, accreditation of schools has been the most authoritative and reliable index of a school's concern for integrity toward its students and quality education.

The Accrediting Commission of the National Association of Trade and Technical Schools evaluates private career schools offering occupational education at a postsecondary level. While an accrediting agency is not part of the government, the U.S. Department of Education has officially recognized several agencies. The NATTS Accrediting Commission is one such nationally recognized accrediting agency under the provisions of Chapter 33, Title 38, U.S. Code and subsequent legislation. Since it is recognized by the Department of Education, students attending an accredited school may be entitled to participate in scholarship, grant, financial aid, and other assistance programs.

Once begun, the process of accreditation generally takes a year to complete. It includes a visit to the school by a team of specialists in education and in the career being taught by the school. The team asks the same questions a prospective student should—

- Does the school clearly state its objectives and demonstrate overall ability to meet them?
- Does it have a qualified administrative staff and faculty?
- Does it have fair and proper admissions and enrollment practices in terms of educational benefits to the students?
- Does it provide educationally sound and up-to-date courses and methods of instruction?
- Does it demonstrate satisfactory student progress and success to include acceptance of graduates by employers?
- Is it fair and truthful in all advertising, promotional, and other representations?
- Does it reflect financially sound business operations?
- Does it provide and maintain adequate physical facilities, classrooms, and laboratories?
- Does it provide student and administrative accounting?

The NATTS Accrediting Commission admits only those schools which give evidence that they meet accreditation standards. Schools listed in the next section have demonstrated they have met these standards. The Commission meets three times a year to review schools applying for accreditation or reaccreditation and may add schools to its accredited list or delete others from it. An accredited school is reviewed every five years to ensure it continues to meet the Commission's standards. Always look for accreditation whether you are considering a university, college, or private career school.

Wyoming Technical Institute, Box 906, Laramie, WY 82070. (307) 742-3776. Offers Automotive Specialist; Auto Body Repairer; Diesel Mechanic.

Career Questions and Answers

Q. Isn't college really the best way to get a good job?

- A. Any good job requires a specialized skill that is in demand. Doctors, lawyers, nuclear scientists, and petroleum engineers achieve their skills through college. Plumbers, carpenters, computer operators, and medical lab technicians acquire their skills in other ways—apprenticeships, on-the-job training, or through a private career school. Yet they all have good career opportunities.

Remember, the college boom began when people saw college as the route to a good career. And when degrees were scarce, it was. Now, the job market emphasis is on technical training. What counts is having a "marketable skill."

Q. What is a "marketable skill"? Why is it so important?

- A. "Marketable skill" means that you have a specific area of expertise which employers need. It may be typing, computer programming, medical assisting, or a knowledge of electronics. But it is a skill needed in today's job market.

It is important because it is a ticket for admission to the job market. Having a marketable skill and having no skill may mean the difference between employment and unemployment.

Q. How can a woman benefit from postsecondary education?

- A. Women have an average work life of 25 to 45 years. In addition, one out of every four households is now headed by a woman who is the major source of income. Women have just as great a need for a good, financially sound, marketable career as men.

Q. Are private career schools only for recent high school graduates?

- A. Many types of students attend private trade and technical career schools. Recent high school graduates make up one very large group. Today's private career schools serve women who seek to enter or reenter the work force, minorities in search of job mobility, displaced workers who need to be retrained for a new occupation, and college graduates seeking a marketable skill.

Q. Will my career education be transferable for college or university credit?

- A. The acceptance of credits among postsecondary institutions is an individual matter and entirely left up to them. Many schools and universities have worked out mutual agreements about the transfer of credits. But the only way to find out if a college or university will accept credits from a private trade or technical career school, or vice versa, is to ask that particular institution.

Q. I'll need financial aid to help get me through. How do I find out what's available?

- A. First, many schools assist students in locating part-time jobs to earn money for tuition and fees. Many of the jobs are in a field related to the field of training. Schools may also have information on scholarships.

Several federal financial aid programs are available to students attending accredited schools. Basically there are three types of programs: grants, loans, and work-study.

Grants are outright awards to needy students enrolled in an accredited postsecondary school. They do not have to be paid back. Pell Grants and Supplemental Education Opportunity Grants are two such federal programs.

Loans, however, must be repaid within a specific period of time after schooling terminates. The National Direct Student Loan Program and the Guaranteed Student Loan Program (GSL) are the two major programs offered.

The third financial assistance program is College Work-Study. The federal government has allotted funds to assist needy students earn part of their educational expenses. Jobs are found for these students by the school. The employer pays a percentage of the hourly wage and the federal government pays the remainder. This program is administered through the educational institution in which the student is enrolled.

For more information regarding financial assistance programs, and special assistance programs to help the handicapped, certain minorities, and veterans, write to: U.S. Department of Education, 400 Maryland Avenue, S.W., Building ROB3, Room 4624, Washington, DC 20202. More information regarding financial assistance programs may be obtained directly from the school and from your state's department of education.

Q. Do occupational schools grant degrees? What's the difference between a certificate and a degree?

A. Most private career schools do not offer degrees. Degrees are more typical of academic institutions which require liberal arts courses. Some of these schools, however, do offer associate and bachelors degrees. Many offer certificates which, like degrees, show that the student has successfully completed training in a career area. But private career school students, in addition to having "a piece of paper," more importantly have expertise in a career area.

Q. If a school says it is accredited, does that mean it is approved by the government?

A. No, accreditation means that a school has met the criteria of a private educational agency. The accrediting agency has a commission composed of prominent educators who volunteer their services to meet regularly and review schools applying for accreditation.

By the way, schools that apply for accreditation do so voluntarily. They do not have to become accredited. That many do so shows their concern that they offer quality education to their students.

The Accrediting Commission of the National Association of Trade and Technical Schools is recognized by the U.S. Department of Education as the agency for the private trade and technical career school sector, but it is not a government agency or even a partial government agency.

Many also confuse licensing with accreditation. Schools are licensed by the state. The state department of education visits a school and reviews its operation to see that it is in compliance with state regulations and laws. In most states, schools must be licensed (like physicians and lawyers) in order to do business. Accreditation is performed by a national agency which has established education standards which the school must meet.

NOTES

Publications

Copies of this Handbook and most other NATTS publications are available on request at no charge. Bulk quantities (as specified) are provided to guidance counselors, employment security agencies, and high schools.

Copy this form, fill out, and send to:

NATTS PUBLICATIONS
P.O. Box 10429
Department 88
Rockville, MD 20850

Please send at no charge the following quantities:
(each publication limited to 400 maximum)

- _____ **Handbook 1988—Career Education That Works For America**—80-page handbook lists information on dozens of careers and tells where training may be obtained
